Unit 5 Test A1

1. "Americans today . . . who live within the Spanish system occupy a position in society no better than that of serfs destined for labor, or at best they have no more status than that of mere consumers. Yet even this status is surrounded with galling restrictions, such as being forbidden to grow European crops, or to store products which are royal monopolies, or to establish factories of a type the Peninsula itself does not possess. To this add the exclusive trading privileges, even in articles of prime necessity, and the barriers between American provinces, designed to prevent all exchange of trade, traffic, and understanding."

Simón Bolívar, *Jamaica Letter*, 1815

The quotation above best supports which of the following conclusions about the author's motives for resistance to Spanish colonial rule in Latin America?

(A) Bolívar opposed the use of Native Americans and Africans as forced laborers in Latin America.

(B) Bolívar rejected Spanish mercantilist policies that restricted free trade in Latin America. ✓

(C) Bolívar was alarmed by the excessive consumerism in the Spanish empire.

(D) Bolívar hoped to undo the effects of the columbian exchange.

"Americans today . . . who live within the Spanish system occupy a position in society no better than that of serfs destined for labor, or at best they have no more status than that of mere consumers. Yet even this status is surrounded with galling restrictions, such as being forbidden to grow European crops, . . . or to establish factories of a type the Peninsula itself does not possess. To this add the exclusive trading privileges, even in articles of prime necessity, and the barriers between American provinces, designed to prevent all exchange of trade, traffic, and understanding. In short, do you wish to know what our future held?—simply the cultivation of fields . . . cattle raising . . . hunting wild game . . . mining gold."

Simón Bolívar, *Letter from Jamaica*, 1815

2. In the excerpt, Bolívar expresses which of the following?

(A) Concern about the lack of restrictions on capital investments

(B) Outrage at the effects of mercantilist policies ✓

(C) Disgust with the extravagant spending of socialist governments

(D) Rebellion against the restrictions of feudalism

Unit 5 Test A1

"By the end of the nineteenth century, Germany had advanced beyond Britain in terms of economic output. The prime reason for this development was that Germany developed newer industries, while Britain continued to stress textile production. Formerly an agricultural country, the German Empire has come to be regarded as one of the leading industrial nations of the world and, in the chemical industries, Germany has for some time occupied a leading place.

One of the most successful chemical and pharmaceutical firms in Germany is the Bayer company. Bayer employs 3,500 people alone at its plant in Leverkusen,* and the factory is so gigantic that all of these people are barely noticed when a visitor tours it. The laboratories are arranged very much in the same manner as the university laboratories in Britain. Each workstation receives a supply of electricity, compressed air, steam, and hot and cold water. The research chemists are paid a salary of about 100 British pounds for the first year. If a chemist has shown himself to be useful in his first year, he may receive a longer contract and may receive royalties on any processes that he invented."

*a city located in west-central Germany near Cologne; until the development of the German chemical industry in the late nineteenth century, Leverkusen was a small rural community.

Harold Baron, British historian, book describing the chemical industry of Europe, published in 1909

3. The emergence of the German industries referred to in the passage is most directly explained by which of the following processes in the nineteenth century?

(A) The spread of new industrial technologies such as the internal combustion engine from the United States

(B) The development of new methods of production during the second industrial revolution ✓

(C) The greater diversity of manufactured goods produced by industrial factories

(D) The growing importance of using coal as fuel in industrial production

Answer B

Correct. In the mid- to late nineteenth century, the second industrial revolution was characterized by the development of new methods of production that helped lead to the emergence of new industries, such as the German chemical industry that is referred to in Baron's report.

4. Great Britain's development of the industry referred to in the first paragraph during the late eighteenth and early nineteenth centuries is best explained by the fact that British factories were the first to

(A) use steam-powered machines for large-scale economic production ✓

(B) use natural resources from colonies to create finished products

(C) use coerced labor for producing manufactured goods

(D) take advantage of mercantilist economic policies to protect themselves from foreign competition

Unit 5 Test A1

Answer A

Correct. British factories used steam-powered machines to industrialize production. The first industry that underwent industrialization in Britain was the textile industry, which helps explain why Britain continued to rely on that industry even in the late nineteenth century, as Baron asserts in the passage.

5. Which of the following developments in the nineteenth century would most likely help explain the size and composition of the workforce at the Bayer plant as described in the second paragraph?

(A) The construction of railroads facilitated the migration of people to interior regions. ✓

(B) The invention of steamships facilitated the migration of colonial subjects to imperial metropoles.

(C) The invention of the telegraph made it easier for companies to recruit educated workers from across the world.

(D) The discovery of electricity made rural communities more attractive places to live for wealthy urbanites.

Answer A

Correct. Since Leverkusen was a small rural community in the inland region of west-central Germany before the development of the German chemical industry and the construction of the Bayer plant in the late nineteenth century, railroads were likely the most critical factor in facilitating the movement of workers, chemists, and their families to the Bayer plant and transforming Leverkusen from a small rural community into a small city.

Unit 5 Test A1

INFORMATION ON PROFITS AND RISKS OF VARIOUS INVESTMENT TYPES, PROVIDED BY ENGLISH COMMERCIAL BANKS AND OTHER PRIVATE LENDERS TO PROSPECTIVE INVESTORS, 1750 TO 1800

Investment Opportunity	Expected Rates of Return or Rates of Interest Charged (per year or per voyage)	Perceived Risk
Land in Great Britain	3–6% per year	Low
Investing in commercial enterprises in Great Britain	6–12% per year	Variable
Land in India	12% per year	Low-Moderate
Loans to European merchants in India or China	10–15% per year	Moderate-High
Loans to Indian or Chinese merchants in India or China	14–25% per year	Moderate-High
Financing trading voyages for Chinese ships from China to Southeast Asia	30–40% per voyage	High
Financing trading voyages for European ships to India, China, Southeast Asia, or the Arabian Peninsula	18–50% per voyage	High

Source: Adapted from Jessica Hanser, "From Cross-Cultural Credit to Colonial Debt: British Expansion in Madras and Canton, 1750–1800," *American Historical Review* 124:1 (2019).

6. Which of the following conclusions is best supported by the data in the table?

(A) Traditional elites introduced complex financial practices.

(B) Financial practices facilitated deeper global economic integration. ✓

(C) Transnational businesses incorporated local merchants into their companies.

(D) Governments sought to stimulate economic activity through lending.

Answer B

Correct. The table provides evidence of English banks and lenders encouraging investment in enterprises in India, China, Southeast Asia, and the Arabian Peninsula, thereby facilitating deeper global economic integration.

Unit 5 Test A1

7. Which of the following most likely explains the differences in the perceived risk associated with investing in land in Britain and investing in land in India, as shown in the table?

(A) While improvements in agricultural productivity made investing in land in Britain relatively safe, Britain was still in the process of securing its control over India. ✓

(B) Britain had a well-developed cottage manufacturing economy that could supplement agricultural income, while India did not.

(C) Rapid urbanization in Britain facilitated large increases in land prices, while the decline of the Mughal Empire led to economic stagnation in India.

(D) While Britain had irrigation systems that made its agricultural land productive, India's climate made sustaining agriculture difficult.

Answer A

Correct. Rising British agricultural productivity in the second half of the eighteenth century made investment in land a low-risk prospect, whereas continued control of much of India by the Mughal Empire in the second half of the eighteenth century meant that British investors lacked the same security of property rights in India that they could claim in Britain.

8. Over the course of the **nineteenth century**, the risks associated with financing the trading voyages of European ships would

(A) decrease, as steamships offered a more reliable and safer method of oceanic transportation ✓

(B) increase, as Asian navies became more of a threat to European navies

(C) increase, as the rise of new colonial powers such as Italy and Germany threatened international trade

(D) decrease, as international organizations succeeded in eliminating almost all piracy

Answer A

Correct. Industrialized ship building and the development of coal-powered steamships increased the speed, safety, and reliability of maritime transport.

Unit 5 Test A1

"The fourth annual meeting of the shareholders of the British South Africa Company was held yesterday at the Cannon-street Hotel. The company's chairman, in his opening address, said, 'Twice during the past year we met when fighting with Africans was taking place in the company's territory, when financial arrangements of a complicated character were pending, and when the outlook of the enterprise seemed full of doubt and difficulty. Today, however, we are in a position far superior to any we had previously occupied and ever had hoped to attain. In founding the British South Africa Company, the shareholders undertook the occupation and development of a considerable extent of valuable territory in South Africa. Thus, because of the far-seeing action of a few men connected with the company, this enormous territory was secured for Great Britain. The perfectly legitimate objections of some people to chartered companies like ours were answered by the certainty that this vast territory—equal in extent to Central Europe—could not have been brought under British sway in any other way.

Turning now to the development of railway communication in our territory, it is being pursued by building lines from the Cape Colony and joining them to other lines that will provide a route over Portuguese Mozambique and to the sea. Postal and telegraphic communications will closely follow, and in some cases already precede, the completion of the railroad. In addition, even before our mines have reached a stage of development great enough to cause a large inflow of population, the shareholders may congratulate themselves on the satisfactory outlook of our finances in Mashonaland*.'"

*a region in northern Zimbabwe that contained extensive deposits of gold and other minerals and metals

Report of Alexander Duff, chairman of the British South Africa Company, to company shareholders in London, recorded in the *Mining Journal, Railway and Commercial Gazette*, published in London, 1895

9. The economic success of businesses such as the British South Africa Company was in part dependent on which of the following developments in the late nineteenth century?

(A) The migrations of indentured workers from Asia

(B) The increasing availability and variety of consumer goods

(C) The development of new technologies such as the telegraph

(D) The adoption of innovative practices in banking and finance ✓

Answer D

Correct. Late-nineteenth-century developments in banking and finance, such as the emergence of the concept of the limited liability company, stock exchanges, and commercial insurance, increased the ability of transnational businesses to raise capital and expand their geographic reach.

10. As described in the passage, the economic model of the British South Africa Company most directly differed from which of the following economic trends in the late nineteenth century?

(A) The shift in Asian and African economies from manufacturing of finished goods to resource extraction

(B) The shift from nation-based businesses and enterprises to transnational businesses and enterprises

(C) The shift from heavy industry to industries centered on the production of consumer goods

(D) The shift from mercantilism to free-market trade policies ✓

Unit 5 Test A1

Answer D

Correct. As described in the first paragraph, the British South Africa Company was a chartered company whose main asset was its exclusive control of a considerable extent of valuable territory in South Africa. This model is more similar to mercantilism and differs from the prevailing trend in the late nineteenth century toward laissez-faire economics and free-market trade policies.

11. The "objections" that the chairman refers to in the first paragraph can most directly be explained in relation to which of the following arguments commonly made by laissez-faire economists in the period 1750–1900 ?

(A) The monopolistic practices of government-chartered joint-stock companies such as the British South Africa Company distorted market competition and hurt consumers. ✓

(B) Granting government charters to joint-stock companies such as the British South Africa Company allowed too much free trade and hurt workers in home countries.

(C) Government involvement in the business of companies such as the British South Africa Company inevitably led to deregulation that removed valuable protections for workers and consumers.

(D) The creation of government-supported joint-stock companies such as the British South Africa Company excluded private investment.

Answer A

Correct. In this period, laissez-faire economists often argued that the monopolistic practices of government-chartered joint-stock companies such as the British South Africa Company distorted market competition (which means that such companies had an unfair advantage over potential competitors because of their exclusive trading rights) and hurt consumers because their monopolistic position allowed them to prevent market competition that could have reduced prices.

Unit 5 Test A1

"The Muslims are not the greatest traders in Asia, though they are dispersed in almost every part of it. In Ottoman Turkey, the Christians and Jews carry on the main foreign trade, and in Persia the Armenian Christians and Indians. As to the Persians, they trade with their own countrymen, one province with another, and most of them trade with the Indians. The Armenian Christians manage alone the whole European trade [with Persia].

The abundance of the Persian silk that is exported is very well known. The Dutch import it into Europe via the Indian Ocean to the value of near six hundred thousand *livres** yearly. All the Europeans who trade in Ottoman Turkey import nothing more valuable than the Persian silks, which they buy from the Armenians. The Russians import it as well.

Persia exports to the Indies [an] abundance of tobacco, all sorts of fruit, marmalade, wines, horses, ceramics, feathers, and Turkish leather of all colors, of which a great amount is exported to Russia and other European countries. The exportation of steel and iron is forbidden in the kingdom, but it is exported notwithstanding.

There are some Persian traders who have deputies in all parts of the world, as far as Sweden on the one side and China on the other side."

*French currency unit

Jean Chardin, French jeweler and merchant, on his travels to Safavid Persia, 1686

12. Which of the following historical processes after 1750 contributed most directly to a change in Safavid production and export patterns as described in the passage?

(A) Economic liberalization

(B) European industrialization ✓

(C) The abolition of slavery

(D) The global silver trade

Answer B

Correct. European industrialization greatly increased productivity and allowed for a transition away from agriculture to manufacturing through market expansion and exporting a large number of goods. This allowed European countries to outproduce empires such as the Safavid empire by providing cheaper and higher quality goods, disrupting their trade.

Unit 5 Test A1

13.

For the forthcoming ***Race and River Carnivals!***

The Spring Race Toilettes that await your selection at **The Myer Emporium**. These clever new creations are the most entrancing, the most fascinating fashions imaginable . . . you must come in and see for yourself how ravishing the colors, beautiful the new fabrics, which master-couturiers have transformed into the most engaging garments for race and reception occasions!

English, American and Continental Original Models—at Myer's!

Displayed in the Model and Misses' Salons, 2nd and 3rd Floors, Main Store—where the exclusive models from abroad present a collection of indescribable elegance for dinner, dance, daytime and sport occasions.

Hats and Accessories!

The very newest silhouettes in "face-framing" hats of straw, summer felt and fabric to be found on the Fourth Floor. Many are exclusive French and American models featuring lengthened backs, widened sides—in small, medium and large shapes. Shoes, Hose, Gloves, Bags, Sunshades, Scarves, Costume Jewellery and other chic accessories will be found in magnificent assorment—Ground Floor, Main Store.

Courtesy of the Coles Myer Archives.

The Australian catalog page of 1929 shown above shows women primarily as

(A) mothers

(B) executives

(C) patriots

(D) participants in competitive sports

(E) consumers in a world economy ✓

Unit 5 Test A1

"[Nineteenth-century] Indian liberal ideas, I argue, were foundational to all forms of Indian nationalism and the country's modern politics. Yet Indian liberalism was both wider in scope, and more specific in its remedies, than what is commonly called nationalism. To put it in its most positive light, Indian liberalism represented a broad range of thought and practice directed to the pursuit of political and social liberty. Its common features were a desire to re-empower India's people with personal freedom in the face of a despotic government of foreigners, entrenched traditional authority, and supposedly corrupt domestic or religious practices. Indian liberals sought representation in government service, on grand juries and, later, on elective bodies. They demanded a free press, freedom of assembly and public comment. Liberals broadly accepted the principle of individual property rights, subject to various degrees of protection for the masses against economic exploitation. Liberals emphasized education, particularly women's education. Educated women would help to abolish domestic tyranny, reinstate the ancient Hindu ideal of companionate marriage and improve the race. But a fine line was to be drawn between instructing women and permitting excessive license in gender relations, which was seen as a Western corruption."

Christopher Bayly, British historian, *Recovering Liberties: Indian Thought in the Age of Liberalism and Empire*, 2012

14. The Indian liberal view of women discussed in the passage is best understood in the context of which of the following?

(A) Changes in gender roles as a result of Indian industrialization

(B) Emerging women's suffrage and feminist movements ✓

(C) The predominantly male migration of Indian indentured labor overseas

(D) The development of more effective means of birth control

Answer B

This option is correct. Just as women in Europe and the Americas quickly recognized that the ideals of the Enlightenment could be used to assert women's political and economic rights, Indian liberals saw women's education and new ideals of companionate marriage as features of their political program.

15. Many Indian historians after independence would likely have objected to Bayly's characterization of Indian liberalism on the basis of their belief that

(A) Indian nationalism was inspired predominantly by Indian cultural and political traditions ✓

(B) environmental considerations were a primary motive behind Indian nationalist sentiment

(C) French literary theories in the late twentieth century were critical to understanding Indian nationalism

(D) the military rebellion in support of the last Mughal emperor was the defining moment for Indian nationalism

Unit 5 Test A1

Answer A

This option is correct. India's rich political and cultural traditions have been drawn upon to support Indian nation building in the 20th century, and many Indian historians would have been likely to emphasize the importance of such local traditions, rather than the diffusion of European ideas.

16. Based on Bayly's argument, Indian liberal ideas were most clearly influenced by which of the following?

(A) Classical Indian religious and philosophical traditions

(B) Marxist political theories of class struggle

(C) Enlightenment concepts of natural rights ✓

(D) Laissez-faire capitalism espoused by European thinkers

Answer C

This option is correct. The passage makes it clear that Indian political thinkers adopted Enlightenment ideas of individual rights, freedom of expression, and the right to national self-determination as they struggled for Indian independence from Great Britain.

"In theory, all of the peoples of the world, though different in their degree of civilization and enlightenment are created equal and are brothers before God. As universal love advances, the theory goes, and as the regulations of international law are put into place, the entire world will soon be at peace. This theory is currently espoused mainly by Western Christian ministers or by persons who are enamored of that religion. However, when we leave this fiction and look at the facts regarding international relations today, we find them shockingly different. Do nations honor treaties? We find not the slightest evidence that they do. When countries break treaties, there are no courts to judge them. Therefore, whether a treaty is honored or not depends entirely on the financial and military powers of the countries involved. Money and soldiers are not for the protection of existing principles; they are the instruments for the creation of principles where none exist.

There are those moralists who would sit and wait for the day when all wars would end. Yet in my opinion the Western nations are growing ever stronger in the skills of war. In recent years, these countries devise strange new weapons and day by day increase their standing armies. One can argue that that is truly useless, truly stupid. Yet if others are working on being stupid, then I must respond in kind. If others are violent, then I too must become violent. International politics is the way of force rather than the way of virtue—and we should accept that."

Yukichi Fukuzawa, Japanese intellectual, *Commentary on the Current Problems, 1881*

Unit 5 Test A1

17. Which of the following most likely influenced Fukuzawa's views in the passage?

(A) The Tokugawa Shogunate's policy of limiting contacts between Japan and the rest of the world

(B) The emphasis on peaceful resolution of conflicts in Shinto and Buddhist religious traditions

(C) The forcible "opening up" of Japanese markets to the West, which led to the Meiji Restoration ✓

(D) The suppression of the Taiping Rebellion in China, which resulted in significant loss of life

Answer C

This option is correct. The United States use of military force to gain access to Japanese markets informed Fukuzawa's assessment of the realities of international power politics.

"Without a revolutionary theory there can be no revolutionary movement. The role of vanguard fighter can be fulfilled only by a party that is guided by the most advanced theory. We have said that there could not have been Social-Democratic consciousness among the workers. It could only be brought to them from without. The history of all countries shows that the working class, exclusively by its own effort, is able to develop only trade union consciousness, i.e., the conviction that it is necessary to combine in unions, fight the employers, and strive to compel the government to pass necessary labor legislation. The theory of socialism, however, grew out of the philosophic, historical, and economic theories elaborated by educated representatives of the propertied classes, the intellectuals. Our worst sin with regard to organization is that by our amateurishness we have lowered the prestige of revolutionaries in Russia."

Vladimir Lenin, Russian exile in Switzerland, *What Is to Be Done?*, 1902

18. In the late nineteenth and early twentieth centuries, some governments responded to the growing popularity of ideas such as the ones expressed in the passage by doing which of the following?

(A) Increasing the number of financial instruments available to help expand transnational businesses

(B) Expanding colonial territories and increasing industrial production

(C) Passing reforms designed to improve the conditions of industrial workers ✓

(D) Opening large sectors of the economy to foreign direct investment

19. The views expressed in the passage best illustrate which of the following processes?

(A) The modification of the economic theories of Adam Smith and John Stuart Mill in European universities

(B) The desire to retain preindustrial forms of economic production by many imperial governments

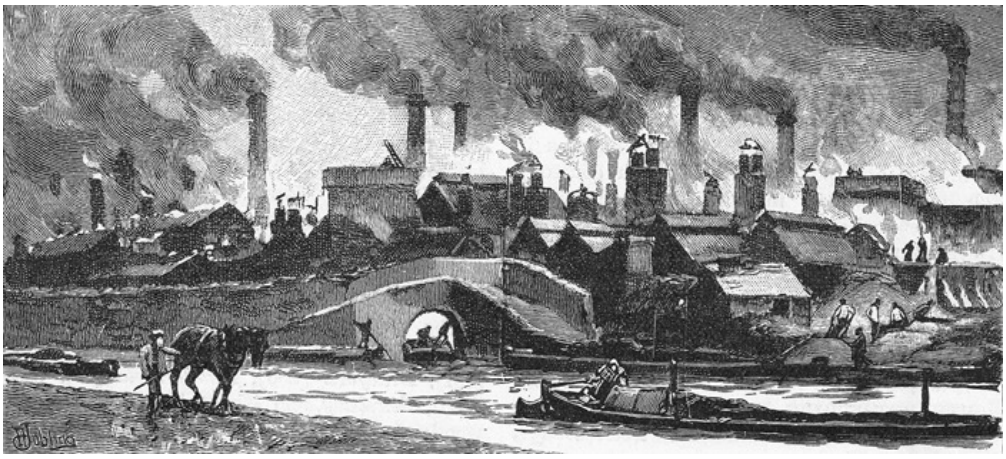
(C) The formulation of alternative visions of society in response to the spread of global capitalism ✓

(D) The expansion of the middle classes in newly industrialized societies

---

Unit 5 Test A1

THE BLACK COUNTRY, ANONYMOUS ENGRAVING DEPICTING THE ENGLISH TOWN OF OLDBURY, CIRCA 1850



Historical Images Archive / Alamy Stock Photo

20. Which of following best explains a likely reason for the title of the image?

(A) The prevalence of slave labor, which was used within the factories

(B) The soot pollution, which resulted from the coal industry in the region ✓

(C) The increase in the use of timber, which was transported along the canals

(D) The construction of factory buildings, which increased throughout the town

Answer B

Correct. The proliferation of factories during the Industrial Revolution produced immense amounts of soot, largely from burning coal. The resulting pollution created the effect seen in the image.

21. The image best illustrates which factor that contributed to Great Britain's increasing prominence as a global power in the nineteenth century?

(A) Great Britain's location on the Atlantic Ocean and its many waterways enabled it to import and export goods. ✓

(B) Agricultural innovations, such as crop rotation and higher-yielding seeds, increased British agricultural output, kept food prices low, and freed up labor from the countryside.

(C) Great Britain's rapidly growing population ensured a steady supply of industrial workers.

(D) Great Britain's access to foreign resources from colonized territories provided raw materials for manufacturing.

Unit 5 Test A1

Answer A

Correct. The image portrays a city along a busy waterway. Britain's location on the Atlantic Ocean and its many waterways and canals facilitated the import and export of resources and manufactured goods.

22. The technological processes reflected in the image had the most direct influence on which of the following?

(A) The French Revolution

(B) The beginnings of the decolonization movement

(C) The rise of Japan in the Meiji era ✓

(D) The expansion of the Ottoman Empire

Answer C

Correct. The process of industrialization reflected in the image was central to the development of the economic and political power of Japan after the Meiji Restoration.

Unit 5 Test A1

JAPANESE ECONOMIC DEVELOPMENT 1890–1975

Year	Real Per Capita Income (in dollars)	Industrial Production as a Percentage of Gross National Product	Heavy Industry as a Percentage of Industry
1890	57	9.8%	12.1%
1900	81	29.8%	17.5%
1910	88	23.1%	31.9%
1920	112	27%	46%
1930	192	28.6%	50%
1938	225	34.5%	63.2%
1948	128	30.8%	56%
1958	276	33.5%	57.7%
1968	750	38%	71%
1975	1500	N/A	74.4%

Source: Adapted from William V. Rapp, "Firm Size and Japan's Export Structure." Found online at https://web.njit.edu/~rappw/C-061.pdf.

23. Which of the following most directly contributed to the overall trend in the percentages of industrial production and heavy industry as shown in the table for the period 1890–1938 ?

(A) The Japanese annexation of Manchuria

(B) The Meiji reforms ✓

(C) Japan's defeat of Russia in the Russo-Japanese War

(D) Japan's entry into the World Trade Organization

Answer B

Correct. The Meiji reforms led to the modernization of Japan's industrial and manufacturing sector, which contributed to growth in per capita income and the growing importance of industrial production

Unit 5 Test A1

and heavy industry to the Japanese economy.

24. For the period circa 1890 to 1910, which of the following countries experienced industrialization trends most similar to those for Japan, as shown in the table?

(A) Qing China

(B) Dutch Indonesia

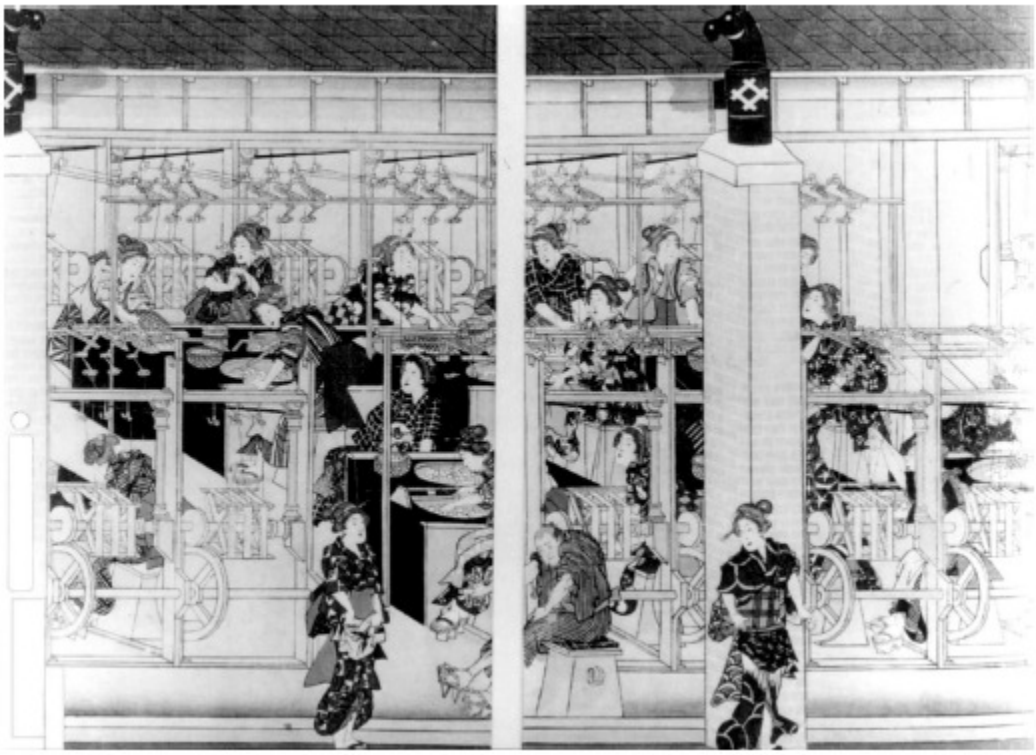
(C) Germany ✓

(D) The Ottoman Empire

Answer C

Correct. During the period from 1890 to 1910, a unified Germany underwent industrialization and became the largest industrial economy in Europe.

25.



The print above suggests that as nineteenth-century Japan industrialized, Japanese women did which of the following?

Unit 5 Test A1

(A) Stayed at home, out of the workforce.

(B) Demonstrated against participation in the factory system.

(C) Became involved in the factory system and industrial production. ✓

(D) Enjoyed leadership positions over their male counterparts in factories and industries.

(E) Chose to continue the domestic, or cottage, system of production.

26. "The [Qing] government sponsored a number of projects designed to bolster the navy. The idea was to adopt Western technology but not the values and philosophies that produced it—China would learn from the West, equal it, and then surpass it."

Haiwang Yuan, editor, historian, *This is China: The First 5,000 Years,* 2010

The philosophy behind the late-nineteenth-century Chinese policy mentioned above was part of which of the following?

(A) The increase in millenarian movements in the nineteenth century

(B) The Chinese government's embrace of procolonial policies

(C) The Chinese government's attempt to reform the economy through self-strengthening ✓

(D) The increasing popularity of Communist thought in China

Unit 5 Test A1

Source 1

"It cannot be denied that when the French nation proclaimed these sacred words, 'Men are born and remain free and equal in rights,' it did not break the chains of humankind. It is we who must put these words into action. The wealthy plantation owners of Saint-Domingue [Haiti], therefore, have everything to fear from the influence of our revolution on the current actions of their slaves. These principles overturn the system on which rests their fortunes. No one should be surprised, therefore, that these plantation owners have become the most ardent enemies of these principles. Yet the moment has arrived to change the social system of the colonies, to reintegrate it into humankind. It is in this greater action that the salvation of all parties, justice, and glory will be found.

The free men of color demand justice, and they should be granted the same rights of citizenship as other Frenchmen. The colonists should no longer refuse them. The artisan slaves should also be called to freedom on the condition that each slave pays a one-time tax for freedom. The other Black slaves may enjoy a conditional liberty, namely that they remain on the land of their masters and work that land for a period ranging between 10 and 20 years depending on circumstances. Afterward, they may obtain the same full liberty as the artisan slaves."

Armand-Guy Kersaint, French nobleman and deputy in the National Legislative Assembly of France, address to the Assembly, Paris, 1792

Source 2

"To bring the Blacks of Saint-Domingue back to their original condition of slavery is impossible: the writings of the *philosophes* have spread over the surface of the globe and neither superstition nor despotism can extinguish their ideas. Everything is headed toward general freedom, everything tells you that man will no longer be the slave of man. Tear off the fatal blindfold: the colony of Saint-Domingue will no longer be cultivated by the hands of slaves.

But, some will object and say, 'The Blacks won't work anymore once they are free. White hands will never suffice to work the land under a burning sun; in short, the colony cannot survive without slavery.' I understand you, cold egoists, men without feeling! You need slaves, that is, men you can treat like beasts of burden; you need slaves, that is, victims. What law forces a man to give another man the entire fruit of his labor? This Black individual is free, because neither the nation nor the Supreme Being created slaves. He is your equal, because he is a man. He is a French citizen, because he serves the country, because he contributes to its splendor as much as you do, and because the French nation loves all its children equally. In exchange for his labor, the Black man will receive a salary proportional to his effort."

H. D. de Saint-Maurice, French journalist, newspaper article written following the destruction of the largest French city in Saint-Domingue, published in a French newspaper in Saint-Domingue, 1793

27. All of the following claims made by Saint-Maurice in Source 2 directly advocate for the abolition of slavery in Saint-Domingue EXCEPT

(A) that "White hands will never suffice to work the land under a burning sun" ✓

(B) that "everything tells you that man will no longer be the slave of man"

(C) that "He is your equal, because he is a man"

(D) that "neither the nation nor the Supreme Being created slaves"

Unit 5 Test A1

Answer A

Correct. Although this statement is made in the second paragraph, Saint-Maurice is quoting what he claims to be a common argument made by French colonists who were against the abolition of slavery in Saint-Domingue. Since this is not a claim made by Saint-Maurice to advocate for the abolition of slavery in Saint-Domingue, it is the correct answer to this question.

28. Which of the following most directly influenced the arguments about social and economic change in Saint-Domingue expressed by Kersaint and Saint-Maurice in the passages?

(A) Mercantilists

(B) Absolutists

(C) Laissez-faire capitalists

(D) Enlightenment thinkers ✓

Answer D

Correct. Both Kersaint and Saint-Maurice argue that men are born free and equal and that former Black slaves should become citizens. These ideas directly derive from Enlightenment philosophers.

29. Kersaint and Saint-Maurice's arguments about granting citizenship to the Black inhabitants of Saint-Domingue are most different from the arguments of those nationalists who claimed that

(A) having a shared language and religion were more important than sharing a contiguous territory in determining who could be citizens within the nation

(B) only those born within the territory of the nation and those who shared a common historical origin should be included as citizens within the nation ✓

(C) political power could only be exercised through the popular will of the nation's citizens

(D) people from separate national groups with distinct cultural traditions could be equal citizens within the same state

Answer B

Correct. Kersaint and Saint-Maurice argue that at least some of the Black inhabitants of Saint-Domingue should become citizens because they were born free and equal and make important contributions to France. Neither argues that a person's place of birth or a common historical origin are critical or exclusive factors in granting national citizenship.

Unit 5 Test A1

30. All of the following statements about Armand-Guy Kersaint are factually accurate. Which would best explain why, unlike the author of Source 2, Kersaint is NOT calling for the unconditional and immediate abolition of slavery?

(A) In his writings, Kersaint advocates for encouraging the willing migration of Africans to French colonies rather than their enslavement.

(B) As an officer in the French navy, Kersaint had participated in military campaigns against the British in the Caribbean and during the American Revolution.

(C) At the time of the French Revolution, Kersaint owned plantations and other property in the French Caribbean. ✓

(D) In a pamphlet written shortly before the French Revolution began, Kersaint called for abolishing the traditional privileges of the French nobility in France and its colonies.

Answer C

Correct. Kersaint was a plantation owner and, therefore, had a vested economic interest in maintaining cheap or free labor and would have felt some sympathy for the arguments of other French plantation owners who opposed the abolition of slavery. This part of Kersaint's background, therefore, helps explain why he argued that only some slaves should be freed immediately and others only granted gradual emancipation, in contrast to Saint-Maurice, who argued that slavery should be totally abolished in Saint-Domingue.

"All the world knows that since the first days of the Ottoman state, the lofty principles of the Qur'an and the rules of the Shari'a were always perfectly preserved. Our mighty sultanate reached the highest degree of strength and power, and all its subjects reached the highest degree of ease and prosperity. But in the last one hundred and fifty years, because of a succession of difficult and diverse causes, the sacred Shari'a was not obeyed nor were the beneficent regulations followed; consequently, the empire's former strength and prosperity have changed into weakness and poverty. It is evident that countries not governed by the Shari'a cannot survive.

Full of confidence in the help of the God, and certain of the support of our Prophet, we deem it necessary and important from now on to introduce new legislation in order to achieve effective administration of the Ottoman government and provinces."

Mustafa Reshid Pasha, Ottoman Foreign Minister, imperial decree announcing the Tanzimat reforms, 1839

31. A historian interpreting the decree would best understand the purpose of the "new legislation" referred to in the second paragraph as an attempt to

(A) establish the Ottoman Empire as a European power by conquering territory in southern Europe

(B) establish Ottoman colonies in sub-Saharan Africa to extract natural resources for factories

(C) allow the Ottoman government to reconquer territories lost to the Safavid and Mughal empires

(D) allow the Ottoman government to compete against industrializing European powers ✓

Unit 5 Test A1

Answer D

Correct. A historian interpreting the decree would correctly assume that its goal was to modernize the Ottoman Empire so it could compete against industrialized Western powers, because the Ottomans were increasingly unable to reject the demands and territorial encroachments of industrialized and industrializing states such as Great Britain and France. For example, the French had conquered much of northern Algeria by 1839, and Great Britain, France, and Russia provided military assistance to Greek rebels and forced the Ottomans to acknowledge Greek independence in 1832.

32. The decree's references to following the rules of Shari'a would best be interpreted as an attempt to appeal to

(A) members of the Ottoman military establishment who supported the dissolution of elite units such as the Janissaries

(B) Christian and Jewish merchants within Ottoman society who sought to benefit from economic liberalization

(C) Sunni religious elites within the Ottoman government who opposed modernization ✓

(D) Shi'a communities in the Ottoman Empire that wanted a democratic Islamic republic

Answer C

Correct. The decree's references to following the rules of Shari'a would appeal to Sunni religious elites within the Ottoman government who opposed modernization, because it would provide them with some reassurances against the potential threat to religious orthodoxy implicit in any modernizing effort that would attempt to enact political and economic reforms along Western models.

33. The decree's statement regarding the change in the situation of the Ottoman Empire, as described in the first paragraph, is a viewpoint that would most likely have been shared by members of which of the following governments in the nineteenth century?

(A) The Russian Empire in the aftermath of its victory in the Napoleonic War

(B) The Qing Empire in the aftermath of the signing of the unequal treaties ✓

(C) The Japanese Empire in the immediate aftermath of the Sino-Japanese War

(D) The Mughal Empire in the aftermath of the Indian Rebellion against the British

Unit 5 Test A1

Answer B

Correct. Following the conclusion of the First Opium War in 1842, Western states imposed numerous unequal treaties on the Qing Empire that forced China to grant special trading privileges and make other concessions. These humiliating conditions encouraged many inside the Qing government to advocate for implementing political and economic reforms similar to those attempted in the Ottoman Empire.

---

34. "The proletariat [working class] grows together with the growth of capitalism. But the day when power goes over into the hands of the proletariat depends immediately not on the level of the productive forces, but on a series of subjective factors: tradition, initiative, readiness for struggle. In a country which is economically more backward, the proletariat can come to power sooner than in an advanced capitalist country."

Leon Trotsky,
Russian communist
leader, article, 1906

Which of the following best represents the purpose of Trotsky's statement in the passage above?

(A) To argue that Russia is ripe for a socialist revolution, despite being less industrialized than other European countries ✓

(B) To question the applicability of Marxist class categories outside of western Europe

(C) To demonstrate that historical change is ultimately driven by individuals, rather than by large impersonal processes

(D) To assert that the phase of proletarian dictatorship is a necessary prerequisite to a successful socialist revolution

CCI / The Art Archive at Art Resource, NY

35. In the second half of the nineteenth century, the working conditions depicted in Image 2 served as an inspiration for those arguing that

(A) oil and electricity rather than coal should become the basis of a new industrial economy

(B) the negative environmental impacts of industrialization should be addressed by stringent regulations

(C) the negative social effects of capitalism should be alleviated by enacting factory regulations ✓

(D) a Protestant work ethic was the most important factor behind Europe's global economic dominance
